## System Requirements

**Client Requirements:**
- Web Browser – Latest Version of Google Chrome, Internet Explorer, Internet Edge or Firefox.
- ISP Speed: Minimum of 50 MBPS for performance, Unmetered
- PC CPU: Core i5+
- PC RAM: 4GB+
- PC Storage: 256GB SSD+
- PC Screen: Color, 1920 X 1080 Resolution (1080p)

**Server Requirements (X2):**
- Minimum requirements for each server
- Processor -Dual Core Intel Pentium or Higher
- RAM - 4GB+
- HDD - 40 GB+

## How Does it Work?

This web-based software solution is accessed by employees and administrators through a URL, which is hosted by a webserver. That webserver then communicates with your database, which stores all of your data.

No local installation of software is required, but minimum hardware and network requirements are listed to ensure consistent performance.

## Core Functionality

- Maintain Current and Historical Employee Profiles and Information

- Self-Sufficient Account Creation and Maintenance

- Announcement Boards

- Web-Based Application that allows multi-user access, with the flexibility to be used on a variety of devices.

## Additional Features

- Easy-to-use User Interface – no more paying for features you do not need!

- Simple back-end design to lower IT overhead costs

- Want Customizations and Enhancements? No Problem! We designed to make future changes a breeze.
